

# The Quality and Environmental Policy

*“Our company aims at supplying products and services that are perfectly tailored to our customers' requirements and conform to all statutory regulations. In particular, we are committed to leveraging the highest technological standards in order to create the prerequisites for a safe and secure use of our products and services without jeopardizing humans or the environment.”*

The responsibility for the quality and the ecological footprint of products and services lies with the management and all staff members of our company.

We commit ourselves to adopt, use, and continually improve a management system that complies with the requirements of the company and documents all process steps. This management system is intended to form the basis for the ongoing improvement of our products and services. Moreover, we commit ourselves to environmental protection and the prevention of pollution as well as compliance with all pertinent and/or binding requirements. We further want to guarantee that correct practices during the manufacturing process can be substantiated by adequate documentation. The awareness of sustainable resources handling as well as the respect of the recycling, waste prevention, and disposal processes shall accompany all of our company activities.

To achieve continual improvement, management will define an annual corporate quality objective. The extent of achievement will regularly be checked in the context of a management review.
